About Me

I am a third-year undergraduate student majoring in Artificial Intelligence Engineering at Chosun University.

My interests include Deep Learning, Climate AI, Neural ODE, and Scientific Machine Learning. I am currently studying climate forecasting models and exploring AI-based approaches for weather and climate prediction.

My long-term goal is to become an AI Research Engineer specializing in Climate AI and Scientific Machine Learning.

Education

Chosun University

Department of AI Software Convergence

Major in Artificial Intelligence Engineering

Year: 3rd Year Undergraduate Student

Relevant Coursework:

- Machine Learning
 - Deep Learning
 - Data Structures
 - Computer Networks
 - Database
 - Web Programming
-

Skills

Programming

- Python (Intermediate)
- Swift (Intermediate)

AI / Data

- Deep Learning (Basic)
- Data Analysis (Basic)

Tools

- Git / GitHub (Intermediate)
 - Xcode
 - VS Code
-

Projects

Climate Forecasting Model Study

Summary:

Study of climate forecasting models using Neural ODE.

Tech Stack:

Python, Deep Learning

Key Activities:

- ClimODE paper study
 - Neural ODE understanding
 - ERA5 dataset exploration
-

DACON AI Competition

Summary:

Participation in AI competitions and machine learning experiments.

Tech Stack:

Python

Key Activities:

- Data preprocessing
 - Model training
 - Performance evaluation
-

iOS Application Development

Summary:

Developed a mobile application using Swift.

Tech Stack:

Swift, Xcode

Key Activities:

- UI design
 - Navigation implementation
 - Mobile application development
-

Experience

- DAICON AI Competition Participant
 - Climate AI Research Study
 - Deep Learning Self Study
 - iOS Application Development using Swift
-

Career Goal

- AI Research Engineer
- Climate AI Researcher
- Scientific Machine Learning Researcher
- Graduate School in Artificial Intelligence
